

# Blow Gun

## VMG Series

RoHS

# 20% reduction in power consumption

with the SMC “Blow gun” + “S coupler” + “Coil tube”

\*10% reduction with the “Blow gun (VMG)” only

Pressure loss **1% or less**

### Amount of electricity used in a factory

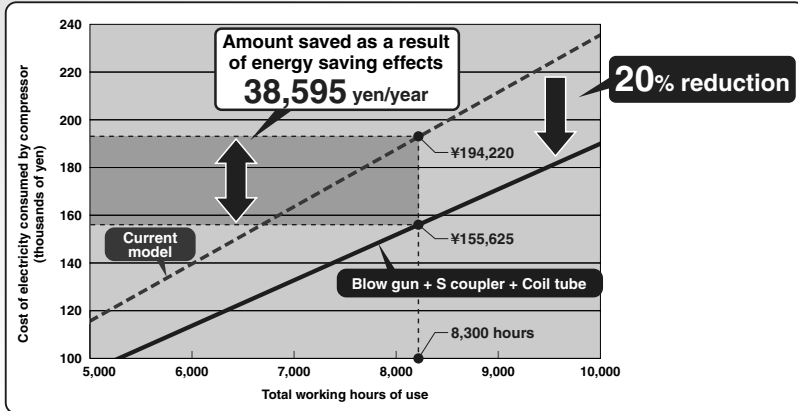

The electricity used by compressors for air accounts for **approximately 20%** of that consumed by the entire factory. Also, **70%** of the air consumed in the process is used for air blowing. SMC blow guns have minimal pressure loss compared with current models, so they can achieve equivalent performance at lower pressures and with less volume of air consumption. As a result, it is possible to achieve a **20% reduction** in power consumption.

# Energy Saving Pneumatic System Proposal

## Energy Saving Effects

When the yearly total working hours spent on air blowing amounts to 8,300 hours, use of current models results in power consumption costs totaling 194,220 yen. When using the SMC system (Blow gun + S coupler + Coil tube), however, the yearly cost is reduced to 155,625 yen, for a total yearly saving of **38,595 yen**, or **20%** of the total.

Energy saving effects with **Blow gun (VMG) + S coupler + Coil tube**

Energy saving effects with **Blow gun (VMG) only**

### Calculation conditions

- Blowing distance: 100 mm
- Impact pressure: 0.011 MPa
- Cost of electricity: 15 yen/kWh

### Work model

- Blow time: 10 seconds
- Frequency: 12 times/hour
- Working hours: 10 hours/day
- Working days: 250 days/year
- Units used: 100
- Resulting total working hours: 8,300 hours

## Valve Construction and Pressure Loss

Straighter flowing fluid  
"improves pressure loss!"

SMC helps you work toward a revolutionized production system with a focus on saving-energy.

## Example of Improvement

Review the air-blow job and change to the SMC blow gun, S coupler and coil tube to create a larger effective area.

		After improvement	Before improvement
Equipment	Coupler	S coupler	Current model
	Piping	TCU1065-1-20-X6	Current coil tube model (I.D. $\phi 5$ , equivalent length 5 m)
	Air gun	VMG (Nozzle size $\phi 2.5$ )	Current model (Nozzle size $\phi 3$ )
Effective area	Coupler, Piping ( $S_0$ )	13.45 mm <sup>2</sup>	5.1 mm <sup>2</sup>
	Air gun ( $S_1$ )	30 mm <sup>2</sup>	6 mm <sup>2</sup>
	Nozzle ( $S_2$ )	4.4 mm <sup>2</sup>	6.3 mm <sup>2</sup>
Effective area ratio ( $S_0$ to $S_1$ : $S_2$ )		<b>3.04 : 1</b>	<b>0.69 : 1</b>
Impact pressure		0.011 MPa (at a distance of 100 mm)	0.011 MPa (at a distance of 100 mm)
Regulator pressure		0.4 MPa	0.5 MPa
Pressure inside nozzle		0.385 MPa	0.276 MPa
Compressor pressure		0.5 MPa	0.6 MPa
Air consumption		257 dm <sup>3</sup> /min (ANR)	287 dm <sup>3</sup> /min (ANR)
Power consumption by compressor		1.25 kW	1.56 kW

# Blow Gun, Coil Tube and S Coupler Selection

Recommended system in accordance with the distance

Energy saving effects are enhanced through the appropriate blow gun model selection in accordance with the distance from the target object.

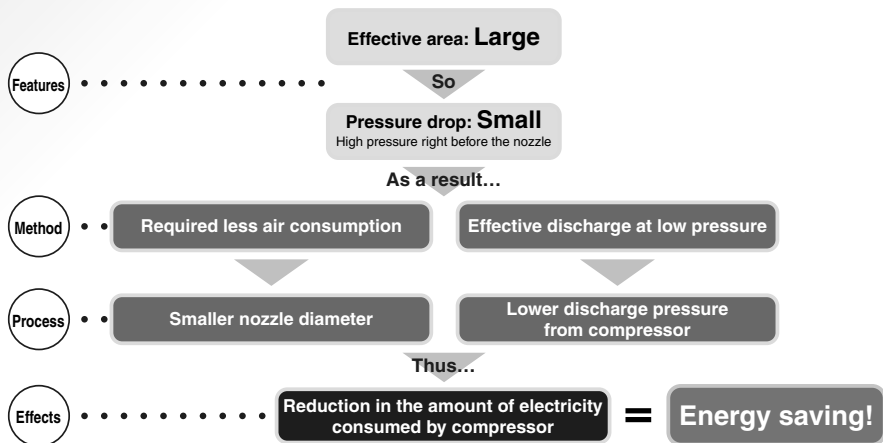

Distance	Recommended system				
	Blow gun	Nozzle size	Fitting	Coil tube*	S coupler
Up to 20 mm	VMG1□□-02-01	ø1	KQ2H06-02AS	TCU0604□-1-20-X6	KK4P-06H
Up to 40 mm	VMG1□□-02-02	ø1.5	KQ2H06-02AS	TCU0604□-1-20-X6	KK4P-06H
Up to 60 mm	VMG1□□-02-03	ø2	KQ2H08-02AS	TCU0805□-1-20-X6	KK4P-08H
Over 60 mm	VMG1□□-02-04	ø2.5	KQ2H10-02AS	TCU1065□-1-20-X6	KK4P-10H

\*□: B (Black), W (White), R (Red), BU (Blue), Y (Yellow), G (Green), C (Clear), YR (Orange)

## Energy Saving Flow

Air guns with an effective area around 6 mm<sup>2</sup> are most commonly used. But the SMC blow gun achieves a 30 mm<sup>2</sup> effective area.

## Related Product

### For pressure loss improvement **S coupler: KK Series**

Improved fitting's restrictor and leakage

■ **Special method of connection and fixation**

With a structure that employs no steel balls, the coupler achieves a slim body without narrowing of the channel, allowing coverage of a wide effective area.

■ **Smooth channel with minimal unevenness**

By not blocking the channel with the valve spring, the loss of effective area can be minimized.

■ **Seal structure with minimal leakage**

The surface-to-surface design allows super-tight sealing.

■ **Conical structure of check valve tip**

This structure achieves smooth flow through the channel.

## Variations

### Nozzle type

#### Low noise nozzle

Mono-porous nozzle (ø2) 90 to 100 dB  
 ø1 x 4 low noise nozzles 80 dB or less  
 (Note) Supply pressure: 0.5 MPa  
 Measured at a 45 degree angle  
 according to JIS B 8379

\* Achieving lower noise by dividing the air blow slit

#### Male thread nozzle

Nozzle size: ø1, ø1.5, ø2, ø2.5, ø3, ø3.5, ø4

\* Powerful and economical

#### High efficiency nozzle

\* Making use of Bernoulli effect and achieving high efficiency

#### Copper extension nozzle

Nozzle length: 100 mm, 150 mm, 300 mm, 600 mm

\* Secures more power even at a greater distance from a workpiece.

### One-touch fitting type

### With cover

#### Cover for male thread nozzle

#### Cover for copper extension nozzle (Outside diameter ø6 only)

Bottom

Metric size: ø6, ø8, ø10

Inch size: ø1/4", ø5/16", ø3/8"

## Operability, Safety, Environment

Not affected by supply pressure,  
 assured operability

When using this product even at a high pressure, the same gripping force is required as for a lower pressure due to the unique balance-poppet construction.

### Use of shock-resistant resin

Shock-resistant resin is used in the main body. No cracks, breaks or other damage occurred in a drop test from a 2-meter height or in a human stomp test.

Components are separable.  
 Environmentally friendly

Resin parts are inscribed with the name of the material. Additionally, all parts can be separated by material.

## VMG Series

# Specific Product Precautions 1

Be sure to read this before handling the products.

### Selection

#### ⚠ Warning

##### 1. Check the specifications.

The products in this catalog are designed to be used in compressed air systems only. If the products are used in an environment where pressure or temperature is out of the specified range, damage and/or malfunction may result. Do not use under such conditions.

#### ⚠ Caution

1. Do not apply the blow gun to flammable, explosive or toxic substances such as gas, fuel gas or refrigerant. Such substances may exude from inside the blow gun.

### Mounting

#### ⚠ Warning

1. Install a stop valve on the supply pressure side of the blow gun to enable emergency shut off in case of unexpected leakage or damage.
2. When installing a nozzle on the blow gun, wrap pipe tape around the threads of the nozzle.
3. When installing the nozzle, secure the nozzle holder of the blow gun by applying a wrench of 22 mm width across flats to the two chamfered surfaces of the holder without applying force to the body. Then, tighten the nozzle with force within the torque range below. As a guideline, it is equivalent to 2 to 3 additional turns with a tool after manual tightening.

Nozzle tightening torque range	12 to 14 N·m
--------------------------------	--------------

Insufficient tightening may cause loosening of the nozzle.

### Piping

#### ⚠ Caution

##### 1. Check the model, type and size before installation.

Also, confirm that there is no scratches, gouges or cracks on the product.

##### 2. Before piping

Before piping, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

### Piping

#### ⚠ Caution

##### 3. Winding of sealant tape

When screwing together pipes and fittings, etc., be certain that chips from the pipe threads and sealing material do not get inside the blow gun. Also, when the sealant tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

4. When tightening the threads, secure the nozzle holder of the blow gun by applying a wrench of 22 mm width across flats to the two chamfered surfaces of the holder without applying force to the body. Then, tighten the nozzle with torque specified in the table below. As a guideline, it is equivalent to 2 to 3 additional turns with a tool after manual tightening.

Be careful that tightening with torque beyond the ranges in the table below may cause damage to the body.

Male thread	Tightening torque N·m
R1/4	12 to 14
R3/8	22 to 24

5. Allow extra length when connecting a tube to accommodate changes in tube length due to pressure.
6. Confirm that no twisting, turning or tensile force or moment load is applied to the port or tube. This may cause fittings to fracture or tubes to be crushed, burst or come loose.
7. Do not abrade, entangle or scratch the tube. This may cause the tube to be crushed, burst or come loose.

### Lubrication

#### ⚠ Warning

##### 1. Do not lubricate the product.

It may contaminate or damage the target object.

### Air Supply

#### ⚠ Warning

##### 1. Use clean air.

Do not use compressed air which includes chemicals, synthetic oils containing organic solvents, salt or corrosive gases, etc., as it can cause damage or malfunction.

## VMG Series

# Specific Product Precautions 2

Be sure to read this before handling the products.

### Air Supply

#### ⚠ Caution

**1. Install air filters.**

Install air filters at the upstream side of blow gun. Choose the filtration degree of 5 μm or finer.

**2. Install an after-cooler, air dryer or water droplet separator, etc.**

Air excessive drainage may cause a malfunction of blow gun and contaminate or damage the target object. To prevent this, install an after-cooler, air dryer or water droplet separator, etc.

### Operating Environment

#### ⚠ Warning

1. Do not use in an atmosphere of corrosive gases, chemicals, sea water, water or water vapor or in an environment where such substances may adhere.
2. Provide shading in an environment where the product is exposed to the sunlight.
3. Do not use in an environment where a heat source is at a close distance.
4. Do not use in an environment where static electricity is a problem. It may cause malfunction or failure of the system. Please contact SMC for use in such an environment.
5. Do not use in an environment where spatters are generated. There is danger of fires caused by spattering. Please contact SMC for use in such an environment.
6. Do not use in an environment where the product is exposed to cutting oil, lubricating oil or coolant oil. Please contact SMC for use in an environment where the product is exposed to such liquid as cutting oil, lubricating oil or coolant oil.

### Maintenance

#### ⚠ Caution

1. In periodical inspections, check the following items and replace the parts if necessary.
  - a) Scratches, gouges, abrasion, corrosion
  - b) Air leakage
  - c) Twisting, crushing and turning of connected tubes
  - d) Hardening, deterioration and softening of connected tubes
  - e) Loosening of nozzles
2. When removing the product, first stop the pressure supply, exhaust compressed air in the piping and check the condition of atmospheric release.
3. Do not disassemble or remodel the body of the product.

### Handling

#### ⚠ Warning

1. To prevent lurching of the nozzle due to air pressure, confirm that the nozzle is not loosened or rattling by pulling it by hand before operation.
2. Make sure to wear safety goggles to protect yourself from splashed substances.
3. Do not direct the tip of the nozzle at the face or other parts of a human body. It may cause danger to personnel.
4. Do not use the product to clean or remove toxic substances or chemicals.
5. Do not drop, step on or hit the product. It may cause damage to the product.
6. Do not use the product to disturb public order or public hygiene.
7. This product is not a toy.
8. After blowing, make sure to hang the product on a hook, etc.

If leaving the product in a dusty place, particles will enter the product and may result in a malfunction.

9. When the blow gun is used or stored, confirm that no twisting, turning or tensile force or moment load is applied to the port or tube. This may cause fittings to fracture or tubes to be crushed, burst or come loose.
10. When attaching a nozzle cover, align the hex parts of the nozzle and nozzle cover before covering. When attaching an extension nozzle cover, confirm that the nozzle tip is completely inserted into the extension nozzle cover.
11. Do not use a nozzle cover or extension nozzle cover if it is cracked or does not fit securely, and replace with a new cover.
